

AUTOSET

KNOCKOUT DOOR

PATENTED

Keep Your Car Wash Moving – Automatically!

DL Manufacturing developed AutoSet™, patented as the 1st fully automatic reset, knockout sectional door designed specifically for the car wash industry. An innovative knockout design allows AutoSet™ to flex and release upon impact without damage to the door or track. AutoSet™ delivers maximum “up time” and “throughput” by reducing maintenance calls as well as costly and annoying downtime for door replacement or repair.

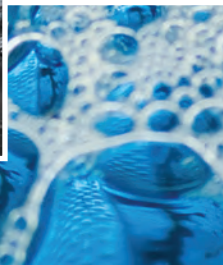

AutoSet™ Features –

- **Patented Polymer guide system** – Allows the AutoSet™ door to be knocked out when impacted.
- **Exclusive Self-Correcting Design** – Simply open and close to reset.
- **Low Maintenance** – Using counterweights instead of springs saves time, money and maintenance.
- **Car Wash Rated** – 3 phase electric, direct drive motor with NEMA 4X push button station and photo eyes are standard.
- **Corrosion Resistant Construction** – Using anodized aluminum, stainless steel and plated components.
- **Cable Cop™** – Standard feature on AutoSet™ that prevents Cable Jump, reducing maintenance.

You can't do this
to just any door and reset it
automatically...

...unless it's AutoSet™
The High-Performance
Car Wash Door.
